

AI Content Generator Bagisto Extension

AI CONTENT GENERATOR

BAGISTO

User Guide

AI Content Generator allows us to create AI content generation from Bagisto admin. We are using OpenAI (ChatGPT) to generate the content. We can generate the content of description, short description, meta title, meta keywords and meta description of any product and cms page.

Admin can choose for which fields they want to generate the content. This module shows the generate-content button after the field and when we click on that button it generates the content on the basis of product name/page title.

Table of contents

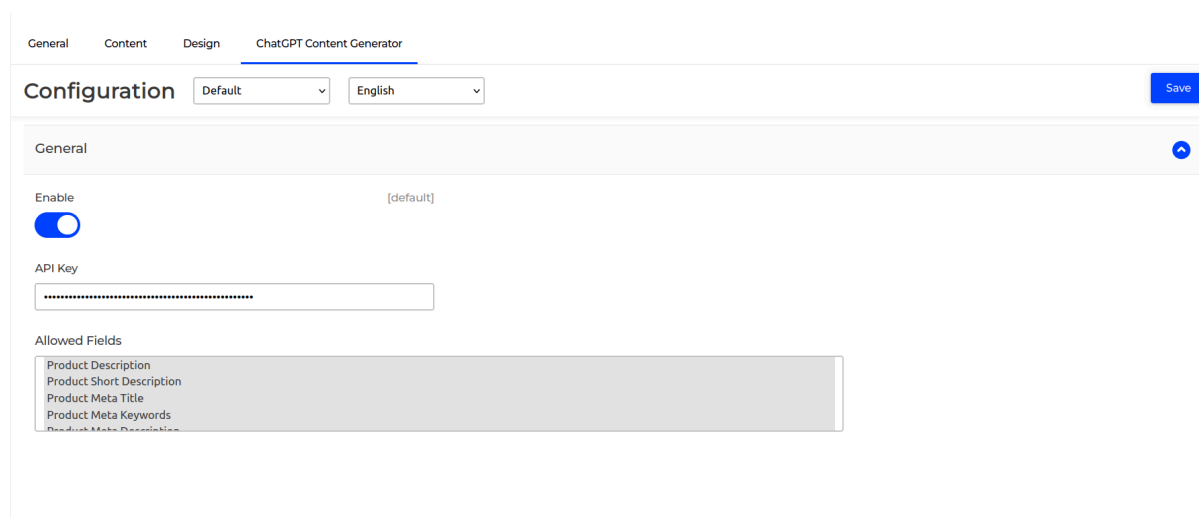

1. Introduction and Purpose
2. How to enable extension?
3. Enable fields for content generation
4. How to add the Content Generation button on any field?

1. Introduction and Purpose

From this module we want to make the admin's life easy so that they can generate rich content easily by clicking just one button. This module will help to get the high ranking in SEO and will generate more traffic on the website.

2. How to enable extension?

2.1. Once you install the extension (refer to installation guide) you need to navigate to the ChatGPT Content Generator section under **Configuration > General > ChatGPT Content Generator** section. Below is the screenshot for the same.

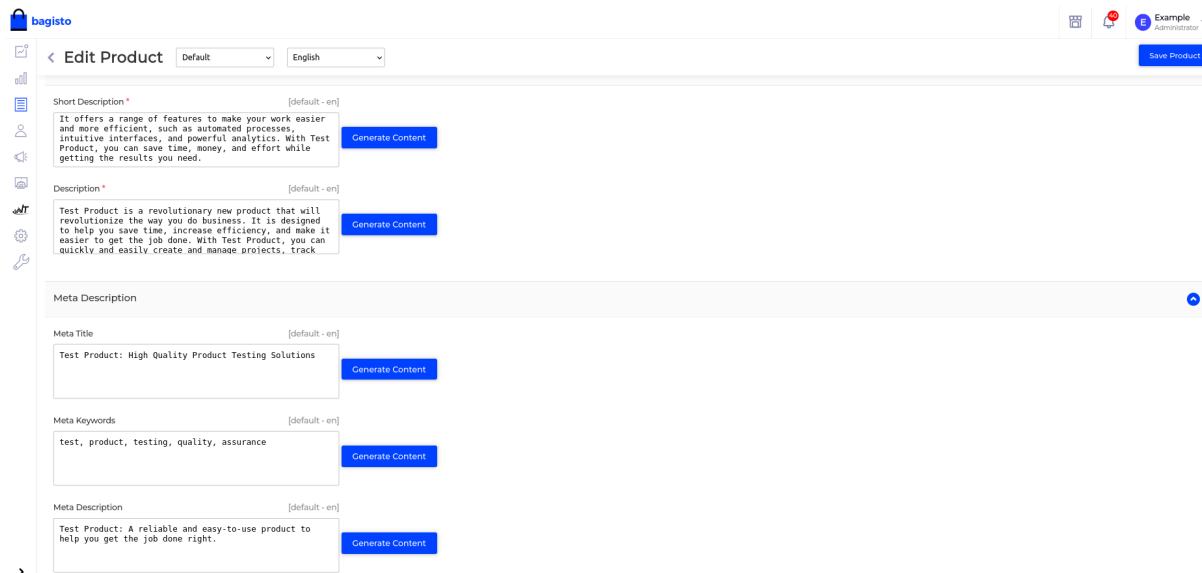

The screenshot displays the configuration interface for the ChatGPT Content Generator extension. At the top, there are tabs for 'General', 'Content', 'Design', and 'ChatGPT Content Generator'. Below the tabs, there are dropdown menus for 'Default' and 'English', and a 'Save' button. The 'General' section is expanded, showing an 'Enable' toggle switch which is currently turned on. Below this is an 'API Key' input field, which is currently empty. At the bottom, there is a section titled 'Allowed Fields' with a list of fields: Product Description, Product Short Description, Product Meta Title, Product Meta Keywords, and Product Meta Description.

2.2. To enable this extension make **Configuration > General > ChatGPT Content Generator > General > Enable** to Yes. Once this extension is enabled you need to add the ChatGPT api key. Check the link below to get the API keys.

3. Enable fields for content generation

You can start using this plugin by simply selecting the fields where you want to generate the AI content. In the above screenshot we have selected product description, short description and meta fields for content generation. As you can see in the below screenshot it is showing the Generator content button for selected fields.

4. How to add the Content Generation button on any field?

You can add the Content generator button on any field to generate AI content. It will work for the input type text or textarea field only. You just need to paste the below code after your field.

```
@include('ai-content-generator::content.generate-button',
    [
        "elementId" => "description" // //Id of the element for which you
        want to
        generate the content. It will consider the input as what is currently in
        that
        field. Make sure the input is between 5 and 50 characters.
    ],
    [
        "customField" => true,
        "generatorType" => "description" //Possible values are
        description, meta_title, meta_keywords, meta_description and
        short_description
    ]
)
```
